Part III DETAILED ACTION

Notice to Applicant(s)

1. This application has been examined. Claims 18-33 are pending.

Specification

2. The abstract of the disclosure is objected to because it exceeds 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 18-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Kageyama et al (hereinafter referred to as Kageyama) (U. S. 5,625,757).

With respect to claims 18 and 26, Kageyama discloses a network control system comprising a computer network (figure 1); a plurality of image forming apparatuses (17 and 18) connected to the computer network (10), each image forming apparatus configured to record an image on a recording paper; a server (14, 15, or 16) connected to the network and configured to store information items of the plurality of image forming apparatuses (column 16, lines 54-67); a

Art Unit: 2622

computer (11, 12, or 13) connected to the network, comprising a computer display (figure 3) configured to display the information items stored in the server (column 16, line 54 to column 17, line 8), and an input device (keyboard) configured to input data into the computer, the computer configured to select the image forming apparatus for recording the image by an operator selecting the information items displayed (column 16, line 54 to column 17, line 8).

With respect to claims 19 and 27, Kageyama discloses the information items include an installation location of the image forming apparatuses (column 29, lines 15-24)..

With regard to claims 20, 21, 28, and 29, Kageyama discloses the information items include machine model, presence of specification data and existence of malfunctions in the image forming apparatus (column 16, line 54 to column 17, line 24).

With respect to claims 22-25 and 30-33, Kageyama discloses storing the layout of an operation panel for each image forming apparatus (column 34, line 66 to column 35, line 8).

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 18, 20, 21, 26, 28, and 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Sugishima (U. S. 5,768,516).

Art Unit: 2622

With respect to claims 18 and 26, Sugishima discloses a network control system comprising a computer network (figure 1); a plurality of image forming apparatuses (11, 13, and 15) connected to the computer network (16), each image forming apparatus configured to record an image on a recording paper (column 3, lines 12-18); a server (which reads on a system management apparatus) (10) connected to the network and configured to store information items of the plurality of image forming apparatuses (column 4, lines 9-12); a computer (12) connected to the network, comprising a computer display (figure 1) configured to display the information items stored in the server (column 4, lines 9-33), and an input device (keyboard) configured to input data into the computer, the computer configured to select the image forming apparatus for recording the image by an operator selecting the information items displayed (column 4, lines 12-17).

With regard to claims 20, 21, 28, and 29, Sugishima discloses the information items include machine model, presence of specification data and existence of malfunctions in the image forming apparatus (column 8, lines 22-37).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2622

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 19 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Sugishima in view of Ooki (U. S. 5,991,846).

With respect to claims 19 and 27, Sugishima differs from claims 19 and 27 in that he does not clearly disclose the information items include an installation location of the image forming apparatuses.

Ooki discloses an information processing system wherein information pertaining to the location of printers is stored in a server (102) and displayed to a user (column 7, lines 4-16). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Sugishima wherein the information items include an installation location of the image forming apparatuses. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Sugishima by the teaching of Ooki in order to allow the user to easily select a preferable printer as discloses by Ooki in column 1, lines 55-58.

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claims 22-25 and 30-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Sugishima in view of Webb (U. S. 5,727,135).

Art Unit: 2622

With respect to claims 22-25 and 30-33, Sugishima differs from claims 22-25 and 30-33 in that he does not clearly disclose storing the layout of an operation panel for each image forming apparatus.

Webb discloses a communication system wherein a remote user is able to view the operation panel of remote printers (the abstract). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Sugishima to display the operation panel of the image forming apparatuses. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Sugishima by the teaching of Webb in order to easily provide status of the printers to the host.
